PRODUCT DESIGN / 15 OCTOBER 2026

Show the product. Make the outcome clear.

24 industry design concepts

Desktop and mobile website previews with matching company-profile cover concepts.

Each industry includes proposed deliverables, intended customer outcomes and acceptance checks. These are design examples, not completed customer projects or measured business results.

A working product to inspect

MonMon's own website

monmon.ai

24 industry menu entries. 19 language choices.

Industry search and navigation were checked on desktop and mobile in the 15 October 2026 release. The menu and language counts were rechecked on the live website.

This is evidence of a real technical implementation. It is not evidence of sales growth, lead conversion or commercial results for a client.

For a customer project: agree scope, supply approved source content, review the working product, then record acceptance evidence. Business results require separate measurement over an agreed period.
